

TIMING IS EVERYTHING

When it comes to controlling electricity costs.

WHAT IS IT?

It's an electricity speedometer for a house/condo/apartment.

Imagine driving your car without a speedometer? How would you know when and how to slow down to avoid an expensive ticket?

WHY IS IT NEEDED?

Until now, the problem has been identifying how to better manage our usage.

Study's verify that with the presence of an in home display monitor, electricity bills (actually) shrink by up to **16.7% annually**.

With the introduction of smart meters and rate increases in Ontario, consumers are quickly changing from passive users of electricity to **active managers**.

KEY PRODUCT FEATURES

Real-time LCD display shows historical and immediate usage

Completely wireless

Programmable for new Ontario **Time of Use rates**

Transmitter adjustable to send signal every, 10, 15, or 20 seconds

Software helps further analyze usage and demand (e2 model only)

Fully certified by Industry Canada
